

Ezequiel David Borges

FULL STACK DEVELOPER

Recife, PE | +55 81 98748-5884 | ezequielborgesdev@gmail.com
linkedin.com/in/ezequielborgesdev | github.com/kiellzz

PROFESSIONAL SUMMARY

Full Stack Developer working with React, TypeScript, Next.js, React Native, and Node.js. Builds end-to-end web and mobile applications with responsive interfaces, authentication, data persistence, real-time communication, and deployment. Hands-on experience with community platforms, financial management, restaurant operations, audio processing, and interactive simulators.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS

Frontend and mobile: React, Next.js, React Native, Vite, Tailwind CSS, Framer Motion

Backend and data: Node.js, Express.js, Supabase, PostgreSQL, MongoDB, WebSocket, Multer, FFmpeg

Tools: Git, GitHub, Vercel, Render, Figma, Prompt Engineering

TECHNICAL PROJECTS

Restaurant Flow System | React Native, React, TypeScript, Node.js, MongoDB, WebSocket

- Developed a restaurant platform with a digital menu, shopping cart, Pix payments, order tracking, and an admin dashboard for managing orders, statuses, and products.
- Used WebSocket to update order statuses in real time, keeping customers and the admin dashboard synchronized without polling.

Crop Rotation Project | HTML, CSS, JavaScript

Porto Digital Technology Residency: Faculdade Senac × Accenture | 2025

- Developed, as part of a six-person team, a responsive web platform for crop rotation planning based on quantum annealing results.
- Worked with branches, pull requests, and GitHub code reviews while managing tasks through a Kanban workflow in Taiga.

GitHub: github.com/gislanysa/projeto-rotacao-cultura

JoinClubs | Next.js, React, TypeScript, Supabase, Tailwind CSS

- Built a platform connecting EA SPORTS FC players and clubs through profiles, positions, preferences, and a connection and friendship system where users choose whether their contact details are public or visible only to connections.
- Modeled data in Supabase/PostgreSQL to support player and club searches by position and preferences.

GitHub: github.com/kiellzz/joinclubs-showcase | Live: joinclubs.vercel.app

EZSaldo | Node.js, Express.js, MongoDB, JavaScript

- Created a Full Stack financial application with persistent data, a financial progress dashboard, and profile and avatar management.
- Implemented JWT authentication with protected routes, isolating each user's financial data, and automated authentication and transaction tests.

GitHub: github.com/kiellzz/financial-tracker | Live: financial-tracker-1ky7.vercel.app/login.html

Slowed + Reverb Maker | Node.js, Express.js, JavaScript, FFmpeg, Multer

- Implemented an audio upload and processing pipeline with FFmpeg and automatic file cleanup.
- Displayed real upload progress with XMLHttpRequest and created previews with the Web Audio API, improving the experience before download.

GitHub: github.com/kiellzz/slowed-reverb-maker | Live: slowed-reverb-maker.onrender.com

Ballers | React, TypeScript, Vite

- Developed a football simulator with card management and a match engine driven by player decisions, events, and attribute-based duels.
- Separated the match engine from the interface through a modular architecture and created automated tests to validate its rules and scenarios.
