PROFESSIONAL SUMMARY

Full Stack Developer working with React, TypeScript, Next.js, React Native, and Node.js, focused on delivering complete web and mobile applications from database to deployment, with authentication, real-time communication, automated testing, and CI. Hands-on experience with community platforms, financial management, restaurant operations, audio processing, and interactive simulators. Seeking a junior developer or internship opportunity.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS

Frontend and mobile: React, Next.js, React Native, Vite, Tailwind CSS, Framer Motion

Backend and data: Node.js, Express.js, Supabase, PostgreSQL, MongoDB, WebSocket, Multer, FFmpeg

Quality and CI: Jest, Supertest, Vitest, GitHub Actions

Tools: Git, GitHub, Vercel, Render, Figma, AI-assisted development

TECHNICAL PROJECTS

Restaurant Flow System | React Native, React, TypeScript, Node.js, MongoDB, WebSocket

- Developed a restaurant platform with a digital menu, shopping cart, simulated Pix checkout, order tracking, and an admin dashboard for managing orders, statuses, and products.
- Used WebSocket to update order statuses in real time, keeping customers and the admin dashboard synchronized without polling, and wrote automated tests for the order flow in the backend and dashboard.

Crop Rotation Project | HTML, CSS, JavaScript

Porto Digital Technology Residency: Faculdade Senac x Accenture | 2025

- Developed, as part of a six-person team, a responsive web platform for crop rotation planning based on quantum annealing results.
- Worked with branches, pull requests, and GitHub code reviews while managing tasks through a Kanban workflow in Taiga.

GitHub: github.com/gislanysa/projeto-rotacao-cultura

JoinClubs | Next.js, React, TypeScript, Supabase, Tailwind CSS

- Built a bilingual (PT/EN) platform, live in public beta, connecting EA SPORTS FC players and clubs through profiles, position and preference filters, and connections where users choose whether contact details are public or visible only to connections.
- Modeled data in Supabase/PostgreSQL with Row Level Security, restricted views, and trigger-based anti-spam limits, with server-side Cloudflare Turnstile validation and PGlite database tests.

GitHub: github.com/kiellzz/joinclubs-showcase | Live: joinclubs.vercel.app

EZSaldo | Node.js, Express.js, MongoDB, JavaScript, Jest

- Created a Full Stack financial application with persistent data, a financial progress dashboard, and profile and avatar management.
- Implemented JWT authentication with protected routes, isolating each user's financial data, and automated authentication and transaction tests (Jest, Supertest) with a CI pipeline on GitHub Actions.

GitHub: github.com/kiellzz/financial-tracker | Live: ezsaldo.vercel.app/login.html

Slowed + Reverb Maker | Node.js, Express.js, TypeScript, FFmpeg, Multer

- Implemented an audio upload and processing pipeline with FFmpeg and automatic file cleanup.
- Displayed real upload progress (XMLHttpRequest) and real FFmpeg progress via NDJSON streaming, and created previews with the Web Audio API before download.

GitHub: github.com/kiellzz/slowed-reverb-maker | Live: slowed-reverb-maker.onrender.com

Ballers | React, TypeScript, Vite, Vitest

- Developed a football simulator with card management and a match engine driven by player decisions, events, and attribute-based duels.
- Separated the match engine from the interface through a modular architecture and created automated tests (Vitest) to validate its rules and scenarios, run in CI with GitHub Actions.
